Sergey Kutsenko

SENIOR RUST BACKEND DEVELOPER

sergey.wild.man@gmail.com | t.me/gnu_wild_man | github.com/wild-man
+374 43 257293 | Based in Armenia | Available for remote opportunities

Summary

Backend engineer specializing in high-performance, low-latency Rust systems: async runtimes, gateways, and real-time data pipelines. Strong PostgreSQL background, including query optimization and schema design. Track record across fintech, cryptocurrency exchanges, network security, and Web3, with a Rust gateway sustaining 220K RPS at a 16MB RAM footprint and real-time analytics processing 1.2M records/minute. Former CTO, previously led an engineering team of 10+ developers.

Technical skills

Rust: Tokio, Axum, Warp, Ntex, Serde, Diesel, tokio-postgres, rdkafka, Flume, Iggy
Languages: Rust, PHP (4–8), JavaScript, SQL, PL/SQL
Databases: PostgreSQL, Oracle, MySQL
Infrastructure: Docker, Kubernetes, Argo, Prometheus, Grafana, Arch Linux
AI-assisted development: Claude Code, Zed Agent, Ollama (Mistral, Qwen-Coder) - code generation, review, testing

Experience

MagicAlchemy *(Online Web3 game)*

Rust Developer June 2025 – May 2026

- Designed backend modules (database schemas and REST API endpoints) for in-game events
- Refactored legacy codebase, improving maintainability and code cohesion
- Integrated an AI-assisted development workflow (Zed Agent) for code review, automated testing, and routine generation of ORM models, API routing stubs, and ETL pipelines

Letknow Pay *(Crypto Payment Gateway)*

Rust/PHP Developer Aug 2023 – May 2025

- Built a high-performance Rust gateway for PHP microservices, sustaining 220K RPS in synthetic tests at a 16MB RAM footprint
- Developed a custom PHP extension written in Rust with a Tokio async runtime for Apache Pulsar message streaming
- Built PHP microservices integrating with blockchain nodes (Ethereum, Cardano, Ripple, and others)

Waves.exchange *(Cryptocurrency Exchange, wx.network)*

Rust Developer Apr 2021 – Jun 2023

- Designed and built backend microservices from scratch in Rust, including blockchain address balance changelogs, investment earnings aggregation, and trade volume analytics
- Contributed to the architecture of ~15 production microservices

Qrator Labs *(DDoS Protection & Network Security), Project: Radar*
Radar analyzes relationships between Internet Autonomous Systems (AS), traffic flows, and network security incidents.

Lead Full-Stack Developer Jan 2015 – Feb 2021

- Designed and implemented real-time visualization of an AS relationship graph, processing 1.2M records/minute
- Built a network security incident data analysis system
- Designed complex data pipelines for AS graph construction and incident tracking

Orbios *(Cloud Storage Platform)*

CTO Dec 2013 – Dec 2014

- Architected the core system: virtual filesystem, distributed file storage, and video/audio conversion pipeline
- Led an engineering team of 10–12 developers, owning technical delivery and timelines
- Built the development environment and CI infrastructure from scratch

Earlier Career (2004–2013)

Backend/Full-Stack Developer: Mail.ru, RBC.ru, molotok.ru, and other web projects.
Foundational experience in PHP, MySQL/PostgreSQL, and JavaScript

EDUCATION

Moscow State Technical University of Civil Aviation Computer Systems, Systems and Networks, 2000
